

Faced with longer print run requirements, printers have found the ideal answer in compressible sleeves. Scapa's compressible sleeve tapes, part of the **Hardmount** range, allow printers to maximise their performance potential. The superior formulation of our double-sided filmic tapes ensure even the thinnest mounting plates stay in place, ensuring optimum printing quality results, even over very long runs.

Superior
printing results
for longer runs

Excellent printing results during longer runs

- Scapa tapes ensure high quality image reproduction even over long print runs and large orders.
- Scapa's compressible sleeve tapes reliably secure the mounting plates during the printing process, producing precise bonding even when the surface is porous and uneven.
- The superior thickness consistency allows for faultless ink distribution and perfect dot balance to guarantee excellent printing results.

Make your process more efficient

- Printing speeds are improved, as Scapa's compressible sleeve tapes have excellent bonding strength yet are easily repositioned resulting in minimal set-up time.
- Scapa's compressible sleeve tapes have lower peel adhesion on the liner side which ensures even the thinnest plates remain secure after demounting without any damage or residue. The tapes are easily removed in one piece after the print run.
