

Scapa Structural Glazing & Architectural Construction Solutions

Acrylic Foam Tapes (AFT), are extremely high performance double sided bonding tapes that are used to fix same and dissimilar substrates in internal and especially external environments. They form very strong and reliable adhesive bonds and withstand thermal movement, dynamic forces and have excellent ageing and weathering properties often replacing the need for mechanical fixing and fastenings.

Features & benefits:

- For indoor and outdoor applications
- Superior UV resistance and environmental properties
- Reduces need for trimming
- Adjusts for thermal expansion/contraction
- Replaces wet glazing, fasteners and conventional tapes
- Conforms to a wide variety of surfaces
- Applies easily and evenly for labor and time savings

Scapa also offers a range of single sided compression foam sealants that are designed for water, air and dust sealing for a variety of construction applications. The products are available in a spectrum of thickness, colour and hardness combinations. Additional protection, masking, joining, splicing and wrapping products complete the Scapa construction portfolio.
