

Shorter, more frequent runs and enhanced quality are quickly becoming the minimum standards in the printing and coating industry. Scapa 2420 and 2421 RollerMate™ tapes are essential for printers and coaters to keep up with these changes.

Scapa 2420 and Scapa 2421 allow you to achieve consistent results in magazine, mail-order catalogues, packaging and other long terms gravure or web fed lithographic printing or coating jobs, by preventing the material from moving across the web.

Consistent
quality with
every coating
run

Scapa RollerMate™ tapes ensure:

- Consistent quality thanks to the stability of the material on the web.
- No more costly downtime for cleaning, as the products prevent build up of adhesives, inks or other deposits.
- Time saving, as the product can be removed smoothly even after longer periods.

A solution for every type of coating:

- Coating with substrates – use Scapa 2420 with special embossed surface for additional prevention against deposits build up.
- Coating using silky materials – Scapa 2421 gives even greater anti-slip surface for stability of the material during coating runs.
